Project name: Database System for a General Blog Site.

Short Description:

In our project, we will design a database system for any general dynamic blog site.Every user will have an account and by using it he can do all the work(create post,like,comment,reply etc.) allowed by the administrator of the blog site.

All of the user's full name, password, email, post and other information will be stored in the database. Also various information about posts,post categories, comments, likes, replies will be stored in the database.

Different types of search operation(queries) can be performed also the database will be normalised.

N.B. : Relational Model will be done by 16.01.04.039 and ER diagram will be done by 16.01.04.046
